

FATEMEH GHASEMI

Game Programmer & Developer

Portfolio: <https://fatemehghasemidev.github.io/>

SUMMARY

Game Programmer and Software Developer with 4+ years of experience in C# and game development, contributing to 2 commercial mobile titles and projects across different genres. Experienced and passionate about designing, developing, and optimizing technical systems, with a strong focus on problem-solving, clean code, and turning complex ideas into reliable, polished software.

PERSONAL INFORMATION

Email:

EDUCATION

Diploma in Computer Engineering

Allameh Jafari's Highschool
2020 - 2023

Bachelor's in Computer Engineering

IAU Azad University
2024 - Present

LANGUAGE

- English - C2
- Germany - A2

EXPERIENCE

Turquoise Games

2024 - Present

Game Programmer

- Developed and maintained gameplay systems for commercial Unity mobile games, including Match Factory and Bingo.
- Took ownership of gameplay features from implementation and debugging to testing and final polish.
- Collaborated closely with designers, artists, animators, QA, and programmers to deliver and refine features.

Indie Game Development

2025 - 2026

Indie Game Developer - 2 person team

- Served as the sole game programmer and developer, taking full ownership of technical architecture, core gameplay systems, and feature implementation from early prototyping through gameplay polish.
- Collaborated closely with the game artist to coordinate asset integration, technical requirements, and production milestones.
- Built and optimized modular C# gameplay mechanics in Unity, ensuring scalable code and smooth gameplay performance.

Freelance Developer

2021 - 2024

Self-Employed / Contract

- Developed and contributed to 5+ game and software projects using Unity and C#, covering gameplay programming, feature development, debugging, and system implementation.
- Worked independently on complete gameplay features and mechanics, from early concept and prototyping to functional delivery.

TECHNICAL SKILLS

Programming Skills

C#, C++, Python, Html, Css

Game Development:

Gameplay Systems, Game Mechanics, Physics Systems, AI & Enemy Behavior, UI Systems, Animation Systems, Performance Optimization

Game Engines & Development Tools:

Unity Engine, Unreal Engine, Visual Studio, VS Code

Version Control & Workflow :

Git, GitHub, GitLab, SourceTree, ClickUp, Notion

3d & Art:

Blender, Photoshop

PROJECTS

Match Factory – Commercial (Mobile) Game

Gameplay Programming – Turquoise games

- Developed core gameplay and physics systems involving hundreds of active objects interacting, stacking, and moving in real time.
- Built gameplay features including Unicorn Race, Key Hunter, and six gameplay boosters using physics, AI, coroutines, animation curves, particles, and event-driven systems.
- Optimized physics-heavy gameplay through Rigidbody and collision tuning, while developing reusable tutorial and gameplay systems.

Bingo – Commercial (Mobile) Game

Gameplay Programming – Turquoise games

- Developed and polished core Bingo systems including number generation, card generation, gameplay logic, and progression.
- Implemented UI, reward, animation, tutorial, and ScriptableObject-based data systems across gameplay and player-facing features.
- Integrated custom game analytics events for tracking gameplay data and player progression.

Hospital Rise – (Windows)

Solo Game Developer

- Built a first/third-person character controller, camera switching, and modular interaction system for environmental objects and gameplay events.
- Developed task-based progression, puzzle systems, scripted events, and spider enemy AI with detection and chasing behavior.
- Implemented supporting systems including save/load, UI, audio, lighting, and animation workflows.

Gnosa – (Windows)

Solo Gameplay Programmer – 2 person team

- Served as the sole gameplay programmer, working closely with the game designer from prototyping through implementation.
- Developed physics-based 2.5D character movement, responsive controls, and environmental interactions.
- Designed and implemented checkpoint and revive systems, in-game menus, scene transitions, and audio management.
- Implemented environmental mechanics including movable objects and a trigger-based light-growth ability.

Bubble Up – (Windows)

Solo Programmer – Global Game Jam 2025

- Implemented physics-based bubble movement, dash mechanics, oxygen survival, environmental hazards, and enemy behaviors.
- Developed custom enemy behaviors including path-following fish and a multi-state jellyfish boss with detection, pursuit, and attack states.

CERTIFICATIONS

Unity Game Engine Development • 11/2022 – 02/2023

Tehran Institute of Technology

Completed 70-hour intensive course with a score of 100/100

Adobe Photoshop Beginner To Advanced • 01/2024 – 05/2024

Tehran Institute of Technology

Completed 50-hour intensive course with a score 88/100

EF SET English Certificate • 12/2023

EF SET Organization
